COVER REFILL GELS

BUILDER GELS

Builder gel with natural effect and optimal coverage developed for refillings. It is a slightly covering Cover Pink, the color of this product is identical with the most popular Cover gel. In case of nails with nail bed extension the regrowth area can be filled in full thickness. With less pigments, that's why even if you use in full height, it will look like as a regular nail bed extension gel worked towards the root of the nail, nicely mashed. The work is faster with it, as the Cover Pink and the Clear material can be replaced at the same time (2 in 1): due to its pigment content, the color of the nail bed will be even, it can be used for nail bed enhancement. Recommended brushes: 6 Gel brush, Xtreme Gel or Nero Merlo II. brush. Use it with base gel for the proper cohesion (e.g. Compact Base Gel). They're not so pigmented so when you sculpting or filling a nail, it will look like if it would be a regular nailbed extension, meanwhile we could create a smile line with a perfect coverage. The filling process is faster because it can be used for clear and cover pink as well. Also, it can be used for babyboomer technique too.

BRANDNEW! SENS AURORA FLAKE BASE&BUILDER GEL

Base Gel with a wonderfully shiny, delicately moderate latte cover in three shades: White, Blue, and Rose. All three contain small flakes of several shades, which give the nails a special shine. It combines the glittery shine with the latte effect which is perfect when it gives the desired shade in the depth of the material but in this case, the different intensities of the glittering flakes applied on several levels make the final result even crazier. Nowadays, nails created with only Base Gel shades are very popular among both clients and professionals, Aurora Flake Base Gel offers the perfect solution for this. The material has excellent adhesion and durability, but in the case of replacement, it is recommended to use Clear Base Gel for the protection of natural nails.

Curing time: 2-3 min in UV,

BASE GELS

SENS BY CRYSTAL NAILS BASE & BUILDER GEL

BASE GEL DEVELOPED FOR ESPECIALLY FOR STRENGTHENING TECHNIQUE. "LIQUID-LIKE BUILDER GEL"

Base and strengthening gel with extra strong cohesion. This bigger version of the product is perfect for everyday salon work because easier to work with the bigger jar: easier to gain the material from it, the surface can be made faster and the chance for creating bubbles in the nail is less last but not least it could last longer. Both of them have excellent coverage and the cohesion is the same as the Clear. It could be especially charming for french, babyboomer nails, base for any nail art or by itself. This is the strongest known Base Gel on the market right now, specially developed for strengthening technique. Due to its special component, it is unique among base gels. It has tiny little artificial silk strands in it, making the product thicker and more flexible. Beyond that; this new technique can help with the preparation of the surface and C-curve, due to its consistency, it will not flow over the lateral nail fold or near the cuticle. It can also help with the cohesion too speeding up the process. The product contains vitamin 'E' and calcium. The order of base gels by cohesion: Sens Base Gel, Compact base Gels, Builder Base Gel, Universal Base Gel, (Easy Off Hardener Gel). This product will not get hot during the curing, remains flexible and it will not break. Curing time: 2-3 min in UV, 1-2 min in LED.

You can use it for changing colors of glittery gel polishes, Tiger Eyes, and Infinity shades as well and even on the surface of transfer foil, platinum foil, chrome powders, Glam and Diva glitters. It is also good for several nail art techniques. CN advise: Use the Glassy Top Coat in an even layer for the uniform color effect. Therefore it is important that the surface on which it is placed has to be even, as leveling the surface with a colored cover is not recommended because it would result in stained color.

USAGE:
For more colors, mix it with a little Art Gel.

DESERT GEL - FOR SAND EFFECT

Thanks to its non-cleansing, thick, paste consistency, it is easy to use for decoration even on the whole surface. You can create a rough, „sand-like” surface with it. Its denser texture allows to scratch different motifs into the applied layer. Also good for 3D patterns as it cures well even in a thick layer. Choose the Gelly, the Phantom or the Art Design brushes for application! Use it the same way as any 3D decoration material: on a top gel or on a raised surface.

Curing time: 2-3 minutes in UV lamp, 1-2 minutes in LED lamp.

3D GEL - FOR 3D PATTERNS

An easy to use, non-cleansing, extra thick gel that cures even in a thick layer. It can be used on a shiny surface as well. Easy to use with 3D brush, but for thin patterns use 0 Short, Art Design or Phantom brush.

Curing time: 3-4 minutes in UV lamp, 2-3 minutes in LED lamp.

SENS BY CRYSTAL NAILS '3G POLISH'

MAXIMUM PIGMENTATION

SENS '3G POLISH' (GEL POLISH)
4ml

SENS '3G POLISH' (GEL POLISH) NAIL ART GEL POLISHES WITH MAXIMUM PIGMENTATION

These are thick and highly pigmented 3 step CrystaLacs which can cover the surface in just one thin layer. Made especially for gel polish decoration techniques. The colors can be mixed with each other, so you can create the required shades for any nail art and patterns. If you would like to weaken the colours or make them less vivid, we recommend you the Sens by Crystal Nails Gel Polish CLEAR 0. You can use it on the whole surface, but not the usual way as we use gel polishes: you have to get a small amount of material on the brush and apply with pulling movements on the surface. Use it in a thin layer and use a strong LED lamp for curing. Make sure, you cure them a little longer than the usual 3 Step CrystaLacs (especially the S007 Black). Curing time: 1-2 minutes in LED lamp, 2-3 minutes in UV lamp.

1. SENS CELEBRATION '3G POLISH' (GEL POLISH)

The SENS NAILS Celebration collection gives a reason to celebration by itself. These elegant, bright and matte gel polishes contain golden flakes. The usage is the same as with the decoration colors. For the arrangement of sequins, we recommend to use a thinner brush. You can use it on its own or also for decoration, it can be perfectly combined with the S015 and S016 Sens 3G polish shades.

2. SENS FLASH '3G POLISH' (GEL POLISH)

FLASH

Light reflective and sparkly 3G Polish which is "only" a very vivid and sparkly gel polish in normal circumstances, but if it gets a light from the side or from the back it will be very shiny and sparkly. If you use a matte top gel, it will have a beautiful granite effect.

3. SENS MILKY '3G POLISH' (GEL POLISH) WHITE AND ROSE

The SENS '3G' (Gel Polish) product family is called MILKY after the effect since it has yellowingfree milky white and a soft feminine pinky shade. The Milky 1 is mild, while the Milky 2 is highly pigmented.

SPECIAL EFFECTS

CHROMATIC CRYSTALAC

Bring some twist to your work with the Chromatic Crystalac, which has a colorchanging, hologram-like effect, a new member of the 3 Step CrystaLac. Gleaming playfully in the sunlight, the color-changing effect has been the favorite for a long time which was not available in 3 STEP gel polish ever before! The usage of this product is identical to the other 3 Step CrystaLacs, despite that the result will be wonderfully glittering and sparkling in the sunlight. It will cover nicely on its own, but you can use different colors, it depends on what kind of effect you would like to achieve.

The curing time is 2-3 minutes in UV lamp and 1-2 minutes in LED lamp.

CN Advice: The Rosegold shade is a perfect match to the Cover nr. 2 CrystaLac.

MOSAIC CRYSTAL LIQUID

DECORATION LIQUID FOR CRACKING EFFECT

Go crazy with our spring shades by the Mosaic Crystal Liquid.

Use this on vivid color or any sparkling material and let the liquid do its job! If you would like to reach smaller cracks, apply it in a thin layer but if you want to see more massive, more spectacular cracks, use it in a thicker layer.

Mosaic design with flowers

The nail set was made with 3S123, 3S78, 3SFD3 CrystaLac shades, Mosaic Crystal Liquid, Aqualink and Mattever Matte Top Gel (by Dóra Kesztyűs).

SPECIAL EFFECTS

AURORA CRYSTAL LIQUID

The Aurora Crystal Liquid is an art liquid that can change the color depending on the temperature and it will look like the the northern light: Aurora Borealis. You can use it on any CrystaLac or Color Gel surface, but we recommend you to use a darker shade to prevail over the whole color scale. Use this way: Matte (use a buffer) the non-cleansing base or if you use a material that requires cleansing, cover the surface with Cool Top Universal Gel and then matte the surface. Use any of the patterns (tendrils, flowers geometric patterns, etc.), then apply Aurora Crystal liquid to the nail surface and wait for it to dry on air. It needs 3-4 minutes, depending on the thickness of the layer, which can be faster if you are using a fan. When it is dried, the product will be translucent. After this, file the edge of the nail and finally cover it with Cool Top Universal Gel in 2 layers. Don't forget to cover the edge.

Attention! If you use this product on the whole nail surface, the material won't remain durable. Use it for decorations that don't reach the edges of the nail plate.

SPECIAL EFFECTS

AQUAINK CRYSTAL DROPS

The new generation among the art liquid product lines. Quick and easy to use. The best base color for this material is white but you can use any pastel or „full cover” color (Milky White Compact Base Gel). It dries on air. What is important that the surface must be scratch-free and completely matte.

Recommended brushes: Phantom, Art Design, Aquarell.

Relative liquids: Nail Prep, Cleanser, Acryl Remover, Easy Remover.

Layer order: color, Cool Top Universal Gel, scratch-free buffing, AquaInk Crystal Drops, Cool Top Universal Gel (we don't recommend using Cool Top 4 Dark on it, since it can cause color fading).

USAGE:
Use Aceton

but for more blurred
effect use

TIGER EYE CRYSTALAC

REAL TIGER EYE EFFECT, THANKS FOR THE SUPER STRONG MAGNETS

Thanks to its components, we can control the particles inside the gel polish, using the special magnets. Use the magnets after the 2nd layer. Hold above the surface of the nail around 3-4 mm for 4-5 seconds and then cure it.

Curing time: in UV lamp 2-3 minutes, in LED lamp 1-2 minutes.

BABYBOOMER ACRYLIC KIT – ACCESSORIES

BABYBOOMER ACRYLIC SET - FOR BABYBOOMER TECHNIQUE

The so-called Baby Boomer technique is very popular with guests because of its low profile. It consists of blending the white free edge with the colour of the nail bed. This technique also does not grow out, yet the overall look is much more natural than the classic French. With this kit his kit is quick and easy to make, as all you need is your favourite acrylic building brush to go with the box. (Plus, it looks great with any decoration, whether it's a sugar effect, velvet dust, mermaid dust or even a gel stain.)

The kit contains:

- Soft White Slower Powder 17g
- Xtreme Crystal Clear Slower Powder 17g
- Cover Pink Master Powder 17g

CRYSTAL LIQUID

A high quality, non-yellowing liquid, which provides good curing time. A mercilessly, strong, air-cure, odorous blue liquid in which the acryl grains bind extremely firmly, stick firmly to the nail and do not give room for yellowing. Its special composition gives the material flexibility for both decoration and building.

UV LIQUID

Odourless, bluish liquid.

Characterized by long setting time (can be shaped for as long as required), as it only sets under UV light. The sticky layer on the surface (easily removed with an old, used file) makes it slower to work with than the smelly version.

LIQUID STORAGE

Double-walled, heat balancing liquid holder to keep your acrylic powder from speeding up in summer and slowing down in winter. Provides the optimum temperature for the right setting speed. The brush can be fully dipped into the liquid without touching the bottom of the jar. This allows more fluid to be applied to the brush and the brush tip is not damaged. SPRAY PREP ANTISEPTIC SPRAY WITH ALCOHOL

USAGE STEPS OF PREPARATION LIQUIDS:

NAIL PREP

Dehydrating, PH - balancing preparatory liquid. Before using the Primer you have to wait until it completely dries.

Its composition is the same as Spray Prep's.

Use it before nail extension with tip.

15ml

1.

PRIMER (ACID)

Adhesion promoter liquid which distracts the moisture from the layers of the nail. Apply when the Nail Prep or Spray Prep completely dried. It should be applied in a thin layer on the surface, but first Remove the excess from the brush on the bottle's neck or wipe the brush on a dry paper towel.

Due to its acid content it must not touch the skin. It must fully dry, since it completes its effect over this time! If it gets on the surface in a thick layer the nail plate would only dry seemingly.

Use only on problematic nails.

15ml

2.

ACID FREE PRIMER

Completely acid-free, adhesion promoter liquid, which does not dry out completely, it will still have a sticky layer. Therefore it should be applied in a thin layer, because this double-sided sticky layer will function as an adhesive between the nail plate and the material. If we apply more acid free primer than needed, this sticky layer will be thicker, so the material on it will not stick on the nail plate and may peel off. Remove the excess from the brush on the bottle's neck or wipe the brush on a dry paper towel.

FORMS & METAL TOOLS

CRYSTAL FORMS

Easy to shape nail form developed for perfect application with excellent arch support and hard material. Thanks to its special layering, it keeps its shape perfectly, does not break or open; sticks strongly. The material is thicker, but it can be cut well. Due to its almond-shaped indentation, it is easier to adjust to the curve of the natural nail. At the heel points, it is not absolutely necessary to cut with the scissors, it is enough just to push the form under the nail, due to the retention of the form, it will still stay in its place and strong enough to press down the nailfold nicely (this is especially good for deep heel points).

Easier to adjust to the arc of the natural nail thanks to its almond shaped indentation!

Usage:
You can easily shaping these forms even in rubber gloves!

Then spray on from the bottle. The more you layer, the more intense the colour depth will be. In 5 different shades! TIN FOIL - GOLD, SILVER, ANTIQUE

Decorate your guest's nails with our multi-purpose breath-thin smoke foils in gold, silver or antique colours. Perfect for covering larger surfaces or for smaller, more delicate decorations, or as a base for marble designs thanks to its special effect. Depending on the effect you want to achieve with the foils, you can use them in two different ways:

One of the big advantages of this foil is that if you want to decorate flat, you don't need to work with extra thicknesses of material. For any material - CrystaLac, gel - apply it to a surface that is not fully cured or fully cured. Then cover with Cool Top Gel Universal or Mattever Matt Top Gel. To achieve a 3D, crimped effect, use an extra layer of gel and smooth the slightly crimped foil over this layer using the StickerUp Tweezer, then top with Cool Top Gel or Mattever Matt Top Gel.

When you use gels press the flakes into the soft material and then set. Three super versions.

PRO FOIL GEL CLEAR

Transparent transfer foil gel, which can be used to create a more convex pattern due to its density. Because its adhesion is excellent for shorter and longer curing times, there is no need to count seconds strictly. When making a pattern, the problem of one part of the line being convex and the other flat does not occur, so the film does not bond evenly and does not stick evenly. Use it for Xtreme foils or sets as a pattern, or even to cover the entire surface. Because it is transparent, you won't see the edge of the foil gel sticking out anywhere, even in hard-to-reach places. If you're working with non-fixing colours, use Pro Foil Gel to create foil decorations with your nails.

XTREME TRANSFER FOIL GEL - IMPROVED FORMULA

A dense, highly manageable and mouldable foil gel that can be used in both UV lamp and LED, depending on tube strength, 10-30 sec. cures in less than 10 minutes. Easy to use: a thin brush (e.g. 0 Short or 0 Long), apply the desired pattern of gel and after 10-30 seconds of curing, press the bottom of the foil on with a strong movement. Pull it off the surface with a firm movement and you have a beautiful decoration.

The curing time depends on your UV/LED lamp and how thick you used the foil gel. Before use test the lamp!

SENS SKETCH PEN

0.03-thin black felt needle that can be used to sketch patterns for gel polish painting, or to complement and make the nail design stand out and unique. If you find it difficult to draw with gel, the felt needle offers you a “stress-free” solution, as it is always easier to draw lines rather than paint. This makes creating the design enjoyable and fun. The felt needle will give you even lines thickness when you draw, so the lines will be spotless and evenly overlapping. Use a shiny top coat eg. Cool Top, cure then buff the surface with a 180 buffer to take off the shine, cleanse, use the pen to create your design, then apply a shiny top coat. It is not recommended to use a matte gel top coat straight after using the pen so it avoids dragging the pen design

ACRYL PAINT RETARDER LIQUID

This colorless liquid can be mixed with a relatively fastdrying acryl paint to slow down the drying process. Drip it on the palette to your ink - the more you drip, the slower it will dry. The liquid makes the texture of the paint soft and creamy, so the edges of the flower petal will not be fibrous. A huge help in the heat!

BULB-CHANGE

HOW TO CHECK THE UV, LED, UVLED BULBS:

It's important that you check the effectiveness of your UV, LED, UVLED bulbs for the more efficient work.

WHY IS IT IMPORTANT?

If the the bulbs are weak or if you are working with a lowpowered lamp, mistakes can occur or the results won't be durable: CrystaLac won't cure properly, get matte or rip off. Gels nails might cure well, but the result won't be long-lasting.

HOW CAN I TEST IT?

Apply one layer of Cool Top Universal Gel to the nail or tip. If the edges are sticky after 2 minutes of curing, where the lights are not direct, the bulbs are weak.

Important: in case of everyday salonwork, the UV, LED, UVLED bulbs need to be changed approximately every 6 months.

WHAT SHOULD I KNOW ABOUT LED, UVLED BULBS/LAMPS?

Even if you working with combined lamps (that means you put LED or UVLED bulbs to the Crystal UV Lamp) or the newest LED/UVLED lamps, you should consider the following facts and take our advises.

- Some white or light material (CrystaLac, Color Gels, some Top Gels) could turn yellow after curing in LED or UVLED lamps. This caused by a chemical reaction but after approximately 10 minutes, when the product has cooled down, it will disappear and you will get the required color.
- We recommend you to keep your jars in a safe distance from your lamp. If you have a lamp which has a back, you can keep them behind it, if you have a backless lamp, keep it next to it with some distance because the light could get through the wall of the jars and damage the material inside. So make sure that you have your gels out of the light what comes from your lamp.
- Some materials will not cure in LED light. These are: Builder Clear I, Pink Builder Hard Gel, Builder Pink I., Builder Pink II., Antifungal Pedi Gel, and the most of the 200, 500, 600 color gel numbers, Supernova, Fly-Brill, Moonlight gels.
- The Tiger Eye Gels, the 3 Step colors, the Water Pro and 1 Step CrystaLacs are love the LED light. That means they don't flow around;
- the pattern on the surface of the Tiger Eye which was made with magnet;
- the dropped color-pattern on WaterPro CrystaLac;
- The 1 Step and 3 Step colors demand the LED or UVLED light for curing because of their consistency and pigments.

IMPORTANT: Know your lamp's qualities! Experiment before you get to use them on your everyday salonwork. It's crucial in case of ChroMirror Pigment Powders, Transferfoil Gels and other thick non-cleansing decorating material. Try to avoid the under-curing which means that you don't keeping your nails inside the lamp enough time to cure the materials. In these cases the products could be slippy or they could fall of from the nail plate. Also, you have to avoid the over-curing, because they could break easily.

CN advice: Never stop checking your lamp or the bulbs in your lamp (depends on the lamp's type)! The best method is when you test your lamp at the first time, observe how much time does it takes to cure your builder gel! Usually it supposed to take 10-15sec. This is not a full cure time, this is for to make the material to that consistency to not to move for the working process. We recommend you to test your products in a monthly basis and if the curing time reaches the 20-30sec the bulbs/product needs to be changed.

IMPORTANT: the test should have taken with already warmed up bulbs.
